*Finally, a book has been written that approaches the evolution and creation controversy from a common sense approach. In An Appeal to Reason, the author provides to the average person an abundance of data regarding this volatile topic. The reader is led through a maze of disclosures regarding: the complexity of living systems the testimony embedded within the fossil record the historical and cultural proofs of man and dinosaurs as being contemporaries the fallacies inherent in the interpretation of radiometric dating the complete shambles of supposed human evolution the faith-science required by the big bang. If a jury were to examine such an array of evidence, they would undoubtedly render the following verdict: the theory of evolution is guilty of being un-scientific and not believable. The rational person, using their common sense, will see through the smoke of deception, and view evolution for what it really is: a humanistic philosophy, a secular religion.*
